## SECTION 1: INTRODUCTION

Prairie Path Water Company (PPWC) owns and operates the Killarney Community Water System (CWS) (IL1115400) according to the rules and regulations of the State of Illinois. On July 26, 2019, the Illinois Pollution Control Board passed new and updated regulations for community water systems including Illinois Administrative Code Title 35, Subpart 604, Subpart C - Source Water Protection Plan. The purpose of this new requirement is to facilitate protection of source water quality and quantity throughout the State. It requires each community water supply that treats surface or groundwater as a primary or emergency supply of water to develop a Source Water Protection Plan (SWPP). The SWPP must contain the following minimum elements:

- a) a vision statement;
- b) a source water assessment;
- c) the objectives; and
- d) an action plan.

The specific requirements for each of the elements list above are contained in the regulation, which is included herein as Appendix A. This report is submitted to the Illinois Environmental Protection Agency (IEPA) in fulfillment of the Killarney CWS's requirement under Subpart C – Source Water Protection Plan.

### 1.1 Background

The Killarney CWS is in Algonquin Township, McHenry County (Exhibit 1-1). The CWS is comprised of a network of various supply, treatment, storage, distribution, and control components. The water system components are specifically designed and operated to provide safe, reliable, and affordable drinking water to the Killarney CWS water customers. The existing supply consists of two shallow bedrock wells designated Well 1 and Well 3. Well 1 is an emergency backup well and Well 3 is the primary community water well. Wells 1 and 3 are cased off through the upper sand and gravel layers, and both Wells 1 and 3 draw from the Silurian-Dolomite aquifers in McHenry County. Well 3 also draws from shallow gray shale and fractured limestone layers just above the Silurian-Dolomite, however, Well 1 is cased off through these layers. The system also features a third water well designated Well 2, which was abandoned in 2007.

The pumped water from the primary water supply Well 3 flows to Killarney CWS's primary Water Treatment Plant (TP02). Here, the pumped water goes through an iron filtration system and is also treated with sodium hypochlorite for bacterial disinfection, fluoridation for dental benefits, and AQUA MAG phosphate blend for corrosion inhibition and metal ion sequestration in the distribution system. The pumped water from the emergency backup Well 1 flows to Killarney CWS's Water Treatment Plant (TP01). The raw groundwater is treated in the same chemical fashion as at TP02, with sodium hypochlorite, fluoridation, and AQUA MAG phosphate blend. The water from Wells 1 (when in-use) and 3 are treated to meet drinking water quality standards and is then distributed to Killarney CWS's residential service population of 1,215 delivered through 352 individual water service connections.

The effectiveness of the system depends on the availability and quality of the water used as the source of water (source water). Significant changes in source water availability or quality often require costly modifications to the water system. Therefore, the Killarney CWS benefits from Source Water Protection because the program can reduce the risk of source water impairment.

## SECTION 2: VISION STATEMENT

This section presents the System's adherence to the requirements of Section 604.310 Vision Statement, which are:

*The vision statement must include the following:*

- a) *the community water supply's policy and commitment to protecting source water;*
- b) *an explanation of the community water supply's resources to protect source water;*
- c) *an explanation of the barriers to protecting source water; and*
- d) *the names of the individuals who developed the vision statement.*

### 2.1 Policy and Commitment to Protecting Source Water

The Prairie Path Water Company - Killarney CWS policy and commitment to protect source water begins with the following vision statement:

*Prairie Path Water Company is committed to Source Water Protection Programs with the purpose of ensuring the safety, integrity and sustainability of our communities' drinking water, for current and future generations to come, all in an effort to help people enjoy a better life and help communities thrive.*

### 2.2 Resources to Protect Source Water

Prairie Path Water Company commits the following resources to protect the source water of the Killarney CWS:

- Human capital and financial resources to protect our source water and to back our commitment to the preservation of safe and sustainable drinking water.
- Staff time and effort to regularly monitor the well supply, monitor changes in potential sources of contamination, and regularly coordinate with local zoning officials to identify future potential sources of contamination.
- Engaging consultants to update the existing source water protection plan to demonstrate the System's commitment to continually improving the plan with updated

information and incorporating lessons learned through experience.

- Development and continual updates to the Killarney CWS Emergency Response Plan.

## 2.3 Barriers to Protecting Source Water

The key to ensuring clean, safe and reliable drinking water is to understand the drinking water supply from the source all the way to the consumer's tap. This knowledge includes understanding the general characteristics of the water and the land surrounding the water source, as well as mapping all the real and potential threats to the water quality. These threats can be natural, such as seasonal droughts or flooding, or created by human activity, such as agriculture, industrial practices, or recreational activities in the watershed. Threats can also arise in the treatment plant or distribution system thanks to operational breakdowns or aging infrastructure.

The multi-barrier approach takes all these threats into account and makes sure there are "barriers" in place to either eliminate them or minimize their impact. It includes selecting the best available source (e.g., lake, river, aquifer) and protecting it from contamination, using effective water treatment, and preventing water quality deterioration in the distribution system. The approach recognizes that while each individual barrier may not be able to completely remove or prevent contamination, and therefore protect public health, together the barriers work to provide greater assurance that the water will be safe to drink over the long term.

By placing integrated barriers from the source to the consumer at the tap, the Killarney CWS helps protect the population it serves from the risk of contamination and waterborne disease. The System's multiple barrier approach includes:

- Source Water Protection - delineation of areas that contribute groundwater to the water supply wells, inventory of existing and future threats also referred to as potential sources of contamination, and management of activities in and around the recharge areas of wells.
- Treatment Systems – disinfection to eliminate pathogens that are responsible for waterborne diseases.

- Distribution Systems – maintaining adequate pressure within the water distribution system to prohibit inflow of non-potable water, controlling pressure during water main breaks using water system valving, conducting water main repairs quickly, and properly disinfecting water mains before they are placed back into service.
- Monitoring programs - 24-hour a day monitoring of the water system using a customized Supervisory Control and Data Acquisition (SCADA) system, frequently collecting, and analyzing water samples, security fencing, and visual inspections of operating facilities.
- Well security – PPWC wellheads are located within locked well houses and or gated off areas to protect from vandalism or intentional contamination efforts.
- Operational Response – maintaining an emergency response plan, employing certified operators with proper training and experience to operate the water system, commitment of the organization to continuous improvement, and the assistance of outside experts as needed.

## 2.4 Names of the Individuals Who Developed the Vision Statement

The names of the individuals who developed the Vision Statement are as follows:

- Justin Kersey, PPWC President
- Mike Miller, PPWC Vice-President of Operations
- David Hankins, PPWC Safety and Compliance Manager
- Kyle Woodworth, PPWC Area Manager
- Tim Holdeman, Engineering Enterprises, Inc.
- Sydney Shaffer, Engineering Enterprises, Inc.
- Jeniece Neville, Engineering Enterprises, Inc.

## SECTION 3: SOURCE WATER ASSESSMENT

This section presents the System's adherence to the requirements of Section 604.315 Source Water Assessment, which are:

- a) *The source water assessment must contain the following information:*
  - 1) *statement of the importance of the source water;*
  - 2) *a list of water supplies that obtain water from this community water supply;*
  - 3) *delineation of all sources of water used by the community water supply, including:*
    - A) *for surface water, description of the watershed, map of the watershed, and intake locations;*
    - B) *for groundwater, the well identification number, well description, well status and well depth; a description of setback zones, and a description of the aquifer for each well;*
  - 4) *a report on the quality of the source water for all sources of water delineated in subsection (a)(3), including:*
    - A) *when and where samples used to determine the quality of the source water were taken. These samples must be tested by a certified laboratory; and*
    - B) *the certified laboratory's results;*
  - 5) *a report on the quality of the finished water;*
  - 6) *identification of potential sources of contamination to the source water;*
  - 7) *analysis of the source water's susceptibility to contamination; and*
  - 8) *explanation of the community water supply's efforts to protect its source water.*

### 3.1 Statement of the Importance of Source Water

The importance of source water can be conveyed by the importance water plays in the communities it serves. The Killarney CWS provides water to several residential sites. The Silurian-Dolomite aquifer is the primary sources of this water. The Killarney CWS utilizes two (2) active community water supply wells. The system's water supply wells provide an average of 85,920 gallons per day to a population of approximately 1,215 people (352 service connections) based on the 2020 Census data. Prairie Path Water Company recognizes that no community can exist without a safe, reliable source of drinking water, and protection of that source water is of the utmost importance.

### **3.2 List of Water Supplies that Obtain Water from the Community Water Supply**

The Killarney CWS currently does not supply water to any Community Water Supplies.

### **3.3 Delineation of all Sources of Water Used by the Community Water Supply**

The Killarney CWS operates two (2) groundwater wells (Wells 1 and 3). A map showing the location of the water utility service area and water supply wells is shown as Exhibit 3-1. Key information about the wells is listed in Table 3-1, including information required by the SWPP regulation and additional information. Additional well information is included in Appendix B.

The Illinois Groundwater Protection Act (IGPA) in its first phase established setback zones to prohibit the siting of potential sources of contamination within a number of feet of the wellhead. The minimum setback zone prohibits the siting of primary or secondary sources within 200 ft of the wellhead for shallow aquifers. An optional maximum setback zone of 1,000 feet is allowed to prohibit primary sources of contamination from being sited between the minimum setback and 1,000 radial feet of the well.

In the second phase, the IGPA established the delineation of a wellhead protection area (WHPA) for wells that draw from unconfined aquifers out to a 5-year time-of-travel boundary, although it is not used in this report.

**Table 3-1: Water Supply Well Information**

### 3.4 Report on The Quality of the Source Water for All Sources of Water

An analysis of the quality of groundwater from the Silurian-Dolomite aquifer used by the System as its source water was conducted as part of the Source Water Assessment. Water quality data from groundwater samples from the System's wells collected from 2013 to 2023 is presented in Table 3-2. A select number of analytical results are included in Appendix C.

The concentration of inorganic constituents in the groundwater pumped by the System's wells is summarized and compared to Class 1 Water Quality Standards for Groundwater (35 Ill. Admin. Code Part 620). Chloride has been reported near the Water Quality Standards. Chloride was detected at a range of 69 – 99 mg/L in Well 3 and 81 - 130 mg/L in Well 1. The concentration of chloride in Well 3 has been decreasing over time, whereas the most recent chloride sample in Well 1 nears the standard of 200 mg/L at 130 mg/L. These chloride levels are not a concern for being a violation because of a stipulation in Part 620.410 of the Illinois Groundwater Quality Standards that indicates no violation can occur as a result of the natural occurrence of an IOC. All organic compounds including the Volatile Organic Compounds (VOCs) and Synthetic Organic Compounds (SOCs) were reported below the detection limits of each testing method.

Exhibit 3-2 is a graph of chloride concentrations from both Wells 1 and 3. The graph shows that chloride concentrations in Well 1 have been steadily rising since 2014 with the latest sample taken in September 2021. Well 3 levels have declined between August 2018 and September 2021.

<sup>b</sup> Detailed laboratory results can be found in Appendix C

 Highlighted value indicates raw water concentration exceeds Class 1 Groundwater Quality Standards.  
 In all cases, treatment is in place to reduce concentration below the standard, and routine monitoring is required.

 Highlighted value indicates raw water concentration for parameter that may be approaching the Groundwater Quality Standard or may cause water quality issues. In some cases, treatment is in place to reduce concentration below the standard, and routine monitoring is recommended.

### Exhibit 3-2: Chloride Concentration Trend

### 3.5 Report on the Quality of the Finished Water

An analysis of Killarney's finished water was conducted as part of the Source Water Assessment. Table 3-3 presents a summary of the System's finished water quality based on analytical results from 2019 to 2023. Based on the water quality sampling results shown in Table 3-3, the Killarney's finished water does not exceed any primary maximum contaminant levels (MCLs). Chlorine does near the primary MCL of 4 mg/L. Iron extends the secondary MCL of 1 mg/L with a 2021 sample reporting of 2.2 mg/L and 2019 sample reporting of 2.6 mg/L.

Shallow aquifers in much of Northeastern Illinois are experiencing elevated Per- and Polyfluoroalkyl Substances (PFAS) levels. The IEPA has initiated a statewide testing program to test for and monitor PFAS levels of 18 PFAS compounds in water supplies throughout the state but has not yet set enforceable drinking water standards for these compounds. Rather, it has set a health guidance level for six (6) PFAS compounds. The USEPA has recently finalized MCLs for PFOS and PFOA and four (4) other PFAS compounds, although those will not take effect until 2029. The Killarney System has no

detectable PFAS levels in its finished water. The treatment processes applied in the Killarney CWS do not remove PFAS compounds, therefore the finished water sample results are representative of PFAS compounds in the source water.

The water quality reports in the form of Consumer Confidence Report can be found on the System's website at: <https://www.myutility.us/prairiepathwater/water-safety/water-quality-reports>.

	VOCs		NR	

**Notes:**

Results are from Killarney 2019 - 2023 Water Quality Reports. NR = No Record

<sup>a</sup> The Well Effluent column reflects the water in the distribution system. ND = Non Detect

<sup>b</sup> MCL = Maximum Contaminant Level MCLG=Maximum Contaminant Level Goal

 Highlighted value indicates finished water concentration exceeds Primary MCL for parameter.

In all cases, treatment is in place to reduce concentration below the MCL, and routine monitoring is required.

 Highlighted value indicates finished water concentration exceeds Secondary MCL for parameter.

In some cases, treatment is in place to reduce concentration below the MCL, and routine monitoring is recommended.

 Highlighted value indicates finished water concentration for parameter that may be approaching Primary or Secondary MCL or may cause water quality issues. In some cases, treatment is

in place to reduce concentration below the MCL, and routine monitoring is recommended.

### 3.6 Identification of Potential Sources of Contamination to the Source Water

To identify all potential sources of contamination to the source water, both land use contamination and point source contamination were investigated. The proximity of the wells to shallow water bodies was also considered.

The point sources were identified using several hazardous chemical inventory databases. A list of a select number of databases used to determine potential sources of contamination to the System's wells are as follows:

- Agency Facility Inventory and Information Search System (AFIIS) (IEPA)
- Environmental Compliance and History Online (ECHO) (USEPA)
- Tier 2 Hazardous Chemical Database (IEMA Tier 2) (IEMA)
- Illinois Underground Storage Tank Database (IUST) (ISFM)
- Leaking Underground Storage Tank Database (LUST) (IEPA)
- Site Remediation Program Database (SRP) (IEPA)
- National Priority List (NPL)
- Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS)
- Resource Conservation and Recovery Act Generator List (RCRA LQG)
- Emergency Response Notification System (ERNS)
- Facility Response Plan (FRP)
- FEMA Underground Storage Tank Listing (FEMA UST)
- Clean Construction or Demolition Debris (CCDD)
- Above Ground Storage Tank (AST)

An environmental consultant, A3 Environmental, was engaged to assist in identifying potential sources of contamination within the maximum setback zone of each well. The consultant performed a search of publicly available information from environmental contamination databases belonging to federal, state, tribal, and local sources. These databases contain site specific history and details that aid in identifying if the contaminant is a threat to the source water.

In addition to these databases, the location of oil and gas pipelines and railroad lines were also evaluated. Sites within the well's 200- and 1,000-foot setback zones were considered as possible threats to groundwater quality. As shown in Exhibit 3-3, there were no point source contaminants identified for either well within the setback zones of the well.

### Exhibit 3-3: Map of Potential Sources of Contamination

### 3.7 Analysis of the Source Water's Susceptibility to Contamination

The wells operated by the Killarney CWS is a shallow bedrock well drawing from dolomite and shale aquifers. The Silurian-Dolomite aquifer is integral to many northern Illinois community water supplies including Killarney. Shallow wells are typically more vulnerable to surface contamination than deep wells because of their lack of bedrock cover due to their proximity to the surface.

Exhibit 3-4 shows the map of geologic susceptibility along with Well 1 and Well 3. The well is located in an area with a geologic susceptibility rating of A2, characterized as impermeable bedrock at 20 feet or less from the surface with till or other fine-grained material overlay. The system's well is a shallow bedrock well, so it is somewhat susceptible to contamination due to its proximity to the surface but because it is in the A2 rating the susceptibility is greatly decreased. Therefore, the geologic susceptibility to contamination of groundwater pumped by the well is considered low.

#### Exhibit 3-4: Groundwater Susceptibility

### 3.8 Explanation of the Community Water Supply's Efforts to Protect its Source Water

- The Illinois Environmental Protection Act provides a minimum protection zone of 200 feet for Well 1 and Well 3. These minimum protection zones are regulated by the Illinois EPA.
- The System's SCADA system monitors each well 24/7.
- The Killarney CWS maintains the Emergency Response Plan as contingency planning documents to ensure that, through emergency preparedness, the community minimizes its risk of being without safe and adequate drinking water.
- The following regulations, which contribute to source water protection are currently active in the System:
  1. Minimum Setback Zones (200 and 400 feet, as designated by Illinois EPA) (415 ILCS 5/14.1 - 14.3)
  6. Well Construction and Pump Installation (77 ILL ADMIN CODE PART 915, 920 and 925)
  7. Backflow and Cross-Connection Programs Required (Illinois Plumbing Code, 77 Ill. Adm. Code 890)
  9. Stormwater Management Program (Administered by McHenry County)

## SECTION 4: SOURCE WATER PROTECTION PLAN OBJECTIVES

This section presents the Killarney CWS's adherence to the requirements of Section 604.320 Source Water Protection Plan Objectives, which are:

*The source water protection plan must contain a list of the community water supply's objectives for protecting source water. These objectives can include meeting the requirements of any of the Sections in this Subpart, including developing a vision statement or performing a source water assessment. Objectives may also address the specific problems or issues identified in the source water assessment and should consider current and potential future issues.*

### 4.1 Identified Concerns

The following concerns regarding the Killarney CWS's source water were identified based on the source water assessment.

- Impacts of existing and potential future contamination on the Killarney CWS's source water.
- Impacts of source water contamination on the Killarney CWS's finished drinking water quality.
- Implications of removing existing and potential future contamination from the Killarney CWS's source water to meet drinking water standards.
- Identifying and implementing effective programs and activities for protecting the Killarney CWS's source water.

### 4.2 Objectives

Given the identified concerns, the Killarney CWS developed the following SWPP objectives. These objectives provide a framework for the Killarney CWS's source water protection activities. The specific activities that align with these objectives are outlined in Section 5 of this Plan.

#### I. Source Water Characterization / Protection Area Delineation

- A. Characterize the aquifers used by Killarney CWS as the source of water supply by identifying groundwater flow patterns, estimating hydraulic properties, and analyzing groundwater quality sampling results.

#### II. Potential Contaminant Source and Land Use Inventories

- A. Use local, state, and federal data resources to identify the location and nature of potential sources of groundwater contamination and associated land uses within the source water protection areas of Killarney CWS water supply wells.

### III. Source Water Protection Management

- A. Public Engagement - Engage the community at-large and provide additional opportunities for source water protection stakeholders.
- B. Source Water Monitoring - Continue to monitor the quality of source water as needed to characterize constituents and ensure the safety of drinking water, always seeking to identify potential future threats to source water and finished water.
- C. Contingency Planning - Maintain and update existing emergency response plans, particularly as it pertains to groundwater contamination.
- D. Existing Regulatory - Leverage existing local, state, and federal regulations / programs that include source water protection components and incorporate into Killarney CWS's source water protection program.
- E. New Regulatory - Consider additional programs that will contribute to protecting source water and incorporate those that are applicable into Killarney CWS's source water protection program.
- F. Planning - Actively review, update, and improve all aspects of Killarney CWS's Source Water Protection Plan.

## SECTION 5: ACTION PLAN

This section presents the System's adherence to the requirements of Section 604.325 Action Plan, which are:

*In the action plan, the community water supply must identify the actions needed to achieve the community water supply's objectives determined under Section 604.320. The action plan must include the following:*

- a) *descriptions of all projects, programs, and activities developed by the community water supply to meet the objectives listed in Section 604.320;*
- b) *the community water supply's schedule for implementing projects, programs and activities;*
- c) *an identification of the necessary resources to implement the plan; and*
- d) *an identification of the potential problems with and obstacles to implementing the plan.*

### 5.1 Projects, Programs, and Activities to Meet Objectives

To meet its Source Water Protection Objectives, the System will continue its current initiatives (as described in Section 3.8), as well as implement the projects, programs, and activities identified below. The entire Action Plan including objectives; projects, programs, and activities; schedule; necessary resources; and potential problems is presented in Table No. 5-1.

### 5.2 Schedule for Implementing Projects, Programs, and Activities

The schedule for implementing the projects, programs, and activities of the System's Source Water Protection Program is presented in Table No. 5-1.

### 5.3 Identification of Necessary Resources to Implement the Plan

The resources necessary for implementation of the plan and the specific projects, programs, and activities requiring these resources are identified in the Action Plan presented in Table No. 5-1.

#### **5.4 Identification of Potential Problems and Obstacles in Implementing the Plan**

The potential problems and obstacles in implementing the plan and the specific projects, programs, and activities requiring these resources are identified in the Action Plan presented in Table No. 5-1.

## PRAIRIE PATH WATER COMPANY - KILLARNEY CWS SOURCE WATER PROTECTION PLAN (July 2024)

Category	Objective	Projects, Programs, and Activities	Schedule	Necessary Resources	Potential Problems
I. Source Water Characterization / Protection Area Delineation	<b>A.</b> Characterize the aquifers used by Killarney CWS as the source of water supply by identifying groundwater flow patterns, estimating hydraulic properties, and analyzing groundwater quality sampling results.	1. Review delineated maximum setback and recharge zones refine/update as necessary.	July 2029	Staff time	Limited data available
		2. Collect static and pumping water levels along with well pumping rates; Collect well performance data during well rehabilitation and testing. Analyze these data for anomalies and trends.	Annually	Staff time	Other priorities
		3. Designate source water protection areas for each of PPWC's water supply wells. For example: minimum setback zone (200 or 400 feet), maximum setback zone (1,000 feet), or recharge areas.	Completed	N/A	N/A
II. Potential Contaminant Source and Land Use Inventories	<b>A.</b> Use local, state, and federal data resources to identify the location and nature of potential sources of groundwater contamination and associated land uses within the source water protection areas of Killarney CWS water supply wells.	1. PPWC staff conduct visual surveys of activities within the minimum and maximum setback zones of water supply wells.	Monthly	Staff time	None
		2. Coordinate with jurisdictional authorities to monitor land use changes within the protection areas.	July 2029	Staff time	Cooperation of jurisdictions
		3. Establish program to engage local Fire Protection Authorities.	July 2029	Staff Time	Interest of jurisdictions
III. Source Water Protection Management	<b>A.</b> Public Engagement - Engage the community at-large and provide additional opportunities for source water protection stakeholders.	1. Public Awareness - Develop and distribute information regarding PPWC source water, including: ● Newsletters ● Annual Water Quality Report ● Bill stuffers / Specialty mailers	Annually	Staff time	None -WQ Report must be updated for compliance
		2. Public Education - Educate community and property owners on how they can participate in PPWC's source water protection efforts.	July 2029	Staff time	Stakeholder interest
		3. Public Involvement - Consider creating local source water protection group to promote communication and collaboration on all matters pertaining to source water protection.	July 2029	Staff time	Stakeholder interest
	<b>B.</b> Source Water Monitoring - Continue to monitor the quality of source water as needed to characterize constituents and ensure the safety of drinking water, always seeking to identify potential future threats to source water and finished water.	1. Monitor known and emerging contaminants, including the collection of source water samples for current and emerging contaminants and the analysis of these data for anomalies and trends.	As required	Staff time	None - Must be completed for compliance
	<b>C.</b> Contingency Planning - Maintain and update existing emergency response plans, particularly as it pertains to groundwater contamination.	1. Update Emergency Response Plan (ERP)	Annually	Staff time	Competing priorities

**PRAIRIE PATH WATER COMPANY - KILLARNEY CWS SOURCE WATER PROTECTION PLAN page 2 (July 2024)**

<b>III. Source Water Protection Management (continued)</b>	<b>D. Existing Regulatory</b> - Leverage existing local, state, and federal regulations / programs that include source water protection components and incorporate into Killarney CWS's source water protection program.	1. Minimum Setback Zones (200 and 400 feet, as designated by Illinois EPA) (415 ILCS 5/14.1 - 14.3)	Ongoing	Staff time	None - State regulation
		2. Well Construction and Pump Installation (77 ILL ADMIN CODE PART 915, 920 and 925)	Ongoing	Staff time	None - local regs.
		3. Backflow and Cross-Connection Programs Required (Illinois Plumbing Code, 77 Ill. Adm. Code 890)	Ongoing	Staff time	None - State regulation
		9. Stormwater Management Program (Administered by McHenry County)	Ongoing	Staff time	None - local regs.
	<b>E. New Regulatory</b> - Consider additional programs that will contribute to protecting source water and incorporate those that are applicable into Killarney CWS's source water protection program.	1. Overlay Ordinance establishing a 1,000-foot maximum setback zone.	July 2029	Staff time	Cooperation of local jurisdiction
		2. Signage at wells and water treatment facilities	July 2029	Staff time, cost of signs	None
		3. Land acquisition / Conservation easements	July 2029	Staff time, funding	Availability of land
	<b>F. Planning</b> - Actively review, update, and improve all aspects of Killarney CWS's Source Water Protection Plan.	1. Participation in the Local Emergency Planning Committee (LEPC) or other local water resources planning agencies.	July 2029	Staff time	Competing priorities
		2. Support County Water Sustainability efforts (if applicable).	July 2029	Staff time	Existence of such programs
		3. Periodic review and updating of the Source Water Protection Plan Vision statement, Source Water Assessment, Objectives, and Action Plan with input from external stakeholders.	July 2029	Staff time / Consultant	None -required for compliance

# **APPENDIX A**

***Illinois Administrative Code Title  
35, Subpart 604, Subpart C -  
Source Water Protection Plan***

TITLE 35: ENVIRONMENTAL PROTECTION  
SUBTITLE F: PUBLIC WATER SUPPLIES  
CHAPTER I: POLLUTION CONTROL BOARD

PART 604  
DESIGN, OPERATION AND MAINTENANCE CRITERIA

SUBPART C: SOURCE WATER PROTECTION PLAN

**Section 604.300 Purpose**

The purpose of the following requirements is to facilitate protection of source water quality and quantity.

**Section 604.305 Source Water Protection Plan Requirement and Contents**

Each community water supply that treats surface or groundwater as a primary or emergency supply of water must develop a source water protection plan that contains the following minimum elements:

- a) a vision statement as set forth in Section 604.310;
- b) a source water assessment as set forth in Section 604.315;
- c) the objectives set forth in Section 604.320; and
- d) an action plan as set forth in Section 604.325.

**Section 604.310 Vision Statement**

The vision statement must include the following:

- a) the community water supply's policy and commitment to protecting source water;
- b) an explanation of the community water supply's resources to protect source water;
- c) an explanation of the barriers to protecting source water; and
- d) the names of the individuals who developed the vision statement.

**Section 604.315 Source Water Assessment**

- a) The source water assessment must contain the following information:
  - 1) statement of the importance of the source water;

- 2) a list of water supplies that obtain water from this community water supply;
  - 3) delineation of all sources of water used by the community water supply, including:
    - A) for surface water, description of the watershed, map of the watershed, and intake locations;
    - B) for groundwater, the well identification number, well description, well status and well depth; a description of setback zones, and a description of the aquifer for each well;
  - 4) a report on the quality of the source water for all sources of water delineated in subsection (a)(3), including:
    - A) when and where samples used to determine the quality of the source water were taken. These samples must be tested by a certified laboratory; and
    - B) the certified laboratory's results;
  - 5) a report on the quality of the finished water;
  - 6) identification of potential sources of contamination to the source water;
  - 7) analysis of the source water's susceptibility to contamination; and
  - 8) explanation of the community water supply's efforts to protect its source water.
- b) Upon request, the Agency will provide technical assistance to a community water supply in conducting the source water assessment.
- b) A community water supply may use a Source Water Assessment Program Fact Sheet prepared by the Agency to fulfill the requirements of this Section.

#### **Section 604.320 Source Water Protection Plan Objectives**

The source water protection plan must contain a list of the community water supply's objectives for protecting source water. These objectives can include meeting the requirements of any of the Sections in this Subpart, including developing a vision statement or performing a source water

assessment. Objectives may also address the specific problems or issues identified in the source water assessment and should consider current and potential future issues.

### **Section 604.325 Action Plan**

In the action plan, the community water supply must identify the actions needed to achieve the community water supply's objectives determined under Section 604.320. The action plan must include the following:

- a) descriptions of all projects, programs, and activities developed by the community water supply to meet the objectives listed in Section 604.320;
- c) the community water supply's schedule for implementing projects, programs and activities;
- c) an identification of the necessary resources to implement the plan; and
- d) an identification of the potential problems with and obstacles to implementing the plan.

### **Section 604.330 Submission**

- a) A community water supply that first commenced construction after July 26, 2019, must develop and submit a source water protection plan simultaneously with the construction permit application.
- b) A community water supply in existence as of July 26, 2019, must develop and submit to the Agency for approval a source water protection plan within the following time frame after July 26, 2019:
  - 1) within 3 years, for a community water supply serving a population greater than 50,000 persons;
  - 2) within 4 years, for a community water supply serving a population of greater than 3,000 but less than or equal to 49,999 persons; or
  - 3) within 5 years, for a community water supply serving a population of less than or equal to 2,999 persons.
- d) An existing community water supply that anticipates using a new source of water for its supply must develop and submit a revised source water protection plan simultaneously with the construction permit application.

### **Section 604.335 Agency Approval**

The Agency, not later than 45 days after the receipt of the source water protection plan, will either approve or disapprove the plan. If the Agency takes no action within the 45 days, the community water supply may deem the plan approved. A community water supply may waive the requirement that the Agency take an action within the 45 days by so advising the Agency in writing.

### **Section 604.340 Evaluation and Revision**

The community water supply must review, and revise as necessary, its source water protection plan no less frequently than every five years. If the community water supply revises its source water protection plan, it must submit the plan to the Agency for approval under Section 604.335.

# APPENDIX C

## *Representative Source Water Quality Analytical Lab Reports*

## Killarney Water System

Sampling Location	Date Sampled	All results reported as Nanograms per liter(ng/L)					Result Below Health Advisory Level?
		PFOS	PFOA	Combined PFOS + PFOA	EPA Health Advisory Level		
Entry Point Well 1	7/22/2020	ND	ND	ND	70	Y	
Entry Point Well 3	7/22/2020	ND	ND	ND	70	Y	

- **PFOS** – Perfluorooctane Sulfonate
- **PFOA** – Perfluorooctanoic Acid
- **Health Advisory Level (HAL)** – To provide Americans, including the most sensitive populations, with a margin of protection from a lifetime of exposure to PFOA and PFOS from drinking water, EPA established the health advisory levels at 70 parts per trillion.
- **Ng/L** – Nanograms per liter(ng/L) which equals Parts per trillion (ppt) – One part per trillion corresponds to one minute in 2,000,000 years, or a single penny in \$10,000,000,000.
- **ND (No Detect)** - Laboratory analysis indicates that the constituent is not present. 2.0 ng/L is the minimum level the lab is reporting a detection for these parameters. The ND (No Detect) represented in the table is indicating there was no detection.
